2020 HISTORICAL CLEAN POWER ALLIANCE PRODUCT CONTENT LABEL[1]

Clean Power Alliance's (CPA) 100% Green Power product covers 100% of your electricity usage.

The State of California mandates that all utilities meet their Renewable Portfolio Standard (RPS) annual requirement in the goal of increasing statewide renewables. 33% of CPA's 100% Green Power product fulfills this year's CA RPS requirement, with the remaining 67% being voluntarily procured by CPA to advance our clean energy goals. 100% of the product's renewable electricity content is also Green-e® Energy certified.

In 2020, 100% Green Power was made up of the following new renewable resources averaged annually.

Green-e Energy® Certified New[2] Renewables in 100% Green Power

Resource Type	Voluntary Renewables	Voluntary Generation Location	CA State Mandated Renewables	CA State Mandated Resource Location
Solar	41%	AZ, CA, and NV	30%	AZ, CA, and NV
Wind	26%	CA	3%	CA
Total Green-e® Energy Certified New Renewables				100%

1. These figures reflect the renewables that were delivered to the 100% Green Power customers in 2020.

2. New Renewables come from generation facilities that first began commercial operation within the past 15 years.

3. At the beginning of 2020, CPA forecasted to provide 100% Green Power customers with a renewable energy product made up of 100% solar. However, due to restricted supply provided by supplier, CPA was required to change this projected mix; as a result, customers of 100% Green Power received the following mix of resources in 2020: 70% solar and 30% wind.

For comparison, the current average mix of resources supplying Southern California Edison (SCE) includes: Renewable (31%), Nuclear (8%), Natural Gas (15%), Hydroelectric (3%), and Unspecified sources of power (42%). This resource mix was prepared in accordance with the California Energy Commission Power Source Disclosure program.

The average home in California uses 532 kWh per month. Source: U.S. EIA, 2019
